Professional Summary

Data Engineer with 3+ years of experience building enterprise-scale data platforms using Snowflake, Databricks, PySpark, SQL and DBT. Experienced in SQL Server to Snowflake migrations, ETL/ELT pipelines, Lakehouse architecture, Snowpark, Streams, Tasks, REST APIs, Row Access Policies (RAP), and cloud data engineering solutions processing 100M+ records/day.

Technical Skills

Programming: Python, PySpark, SQL, Bash

Big Data: Apache Spark, Databricks, Delta Lake, Delta Live Tables

Snowflake: Snowflake, Snowpark, Streams, Tasks, Dynamic Tables, RAP, RBAC, Masking Policies, Time Travel, DBT

Data Engineering: ETL/ELT, Data Migration, CDC, SCD Type 2, Data Modeling, Data Validation, Reconciliation, Medallion Architecture

Databases: SQL Server, Oracle, MySQL

Cloud: AWS, Azure

Tools: Airflow, Git, CI/CD, REST APIs, FastAPI, Power BI, Looker, Figma, Jira

Professional Experience

Data Engineer — Canaries Automation

May 2026 – Present

Client: Confidential

- Developing enterprise-scale cloud data applications using Snowflake for the Insurance domain.
- Leading Microsoft SQL Server to Snowflake migration by designing scalable ETL/ELT pipelines, ensuring seamless data migration and modernization.
- Implementing Snowflake Streams, Tasks, Snowpark, Dynamic Tables, and Row Access Policies (RAP) to build secure, automated, and scalable data workflows.
- Designing data validation, reconciliation, and testing frameworks to ensure migration accuracy and data integrity.
- Integrating enterprise applications using REST APIs and JSON-based services for automated data ingestion and synchronization.
- Optimizing Snowflake query performance through warehouse tuning, clustering strategies, and SQL optimization.
- Implementing RBAC, Masking Policies, and governance controls to secure sensitive insurance data.
- Collaborating with business analysts, UI/UX teams, and stakeholders using Figma to translate business requirements into scalable application solutions.
- Participating in Agile ceremonies, sprint planning, production deployments, and release management.

Data Engineer — Decision Minds

Apr 2025 – May 2026

Client: NXP Semiconductors

- Built enterprise Delta Live Tables (DLT) pipelines processing over 100M+ records/day using Databricks and PySpark.
- Designed Medallion Architecture (Bronze → Silver → Gold) for scalable enterprise analytics.
- Implemented Slowly Changing Dimension (SCD Type 2) pipelines for historical data tracking.
- Engineered distributed Spark transformations involving joins, aggregations, window functions, and skew optimization.
- Improved Spark pipeline performance by 30–40% through partitioning, caching, broadcast joins, and query optimization.
- Led Oracle to Databricks migration including schema conversion, validation, reconciliation, and production rollout.
- Built analytics-ready data marts supporting BI reporting and Machine Learning feature engineering.
- Optimized Delta Lake storage using compaction, partitioning, and file optimization strategies.

Client: GoFundMe

- Developed enterprise ELT pipelines using Snowflake and DBT.
- Designed modular DBT models supporting incremental processing and reusable transformations.
- Built complex SQL transformations using CTEs, joins, window functions, and analytical functions.
- Optimized Snowflake warehouse utilization, clustering, pruning, and query execution.

- Implemented automated testing, documentation, and lineage within DBT.

Associate Engineer — Quess Corp

Aug 2024 – Apr 2025

Client: Indigo Airlines

- Developed end-to-end ETL pipelines using PySpark, SQL, and Databricks.
- Built ingestion frameworks for REST APIs, MySQL, and enterprise relational databases.
- Implemented data quality validation and automated monitoring using Apache Airflow.
- Designed reusable ETL components supporting enterprise analytics.
- Optimized Spark jobs and SQL queries to improve processing efficiency.
- Collaborated with business stakeholders to deliver reporting-ready datasets.
- Supported production deployments, issue resolution, and workflow monitoring.

Trainee Engineer — Abeyaantrix Solutions

May 2023 – Feb 2024

Client: Lockheed Martin

- Built scalable Spark-based batch and near real-time ETL pipelines.
- Assisted in designing data transformation workflows using Python and SQL.
- Worked extensively with Snowflake for loading, transformation, and query optimization.
- Developed ingestion pipelines from MySQL and enterprise data sources.
- Supported Airflow workflow scheduling and monitoring.
- Contributed to Power BI dashboards and reporting solutions.
- Followed Git-based version control and Agile development practices.

Certifications

- SnowPro Advanced: Data Engineer – Snowflake
- SnowPro Core Certification – Snowflake
- Databricks Certified Data Engineer Associate
- Databricks Certified Generative AI Engineer Associate
- Databricks Lakehouse Fundamentals
- Databricks MLOps Fundamentals
- Claude Certified Architect – Foundations (Anthropic)
- Problem Solving (Basic) – HackerRank
- Partner Training – Data Intelligence & Interoperability with SAP
- Databricks Certified Machine Learning Engineer Associate (In Progress)

Education

Bachelor of Engineering (Computer Science)
ATME College of Engineering, Mysuru
